

## Weather Monitoring System Installed at C-Block, MNS-UAM

MNS-UAM is progressing day by day in terms of Research Activities. Recently, Weather Monitoring System had been installed in MNSUAM. The purpose is to get the updates about the weather predictions at a certain limit of time and the level of smog and prevailing conditions. This will help in production of crops in facilitative manner, helping in predictions of prevailing environmental conditions and to develop strategies according to that.
